

Mad-BBL Multibrand Design System & Project Plan

— Rebuild (2025-10-23)

Reconstructed from our ongoing Tuff Buffs / Black Belt Legacy work. This captures the *entire* design system, app/theme specs, and business plan scaffolding you described as missing on Oct 23, 2025. Use this as the canonical source going forward.

0) Brands & Scope

- **Mad-BBL App**: shared component library + app shell used across brands.
- **Tuff Buffs** (martial arts directory + education).
- **Black Belt Legacy** (lineage graphs, ranks, schools, members, media).
- **WEKAF USA** (weapons arts events, rankings, brackets, results).
- **Ronin Dojo Design** (agency site + product pages + design ops).
- **White-Label Template Sites** (starter sites for studios/teams/associations).

Deliver once as a unified mono-repo + shared WordPress theme pack + Pods/Gravity Forms schemas.

1) Design System (Multibrand)

1.1 Tokens (base → semantic)

Base tokens - Spacing: `s(2,4,6,8,12,16,20,24,32,40,48,64,80)` px - Radii: `r(4,8,12,16,24,32)` - Shadows: `elevation(1..6)` (umbra/penumbra/ambient) - Typography scale: `xs, sm, base, md, lg, xl, 2xl, 3xl, 4xl` - Motion: `dur(100,150,200,250,300,400)`, easing: `standard, emphasized` - Grid: 8-pt base, 12-col @ 1280+, 8-col @ 768-1279, 4-col @ <768

Semantic color slots - `bg.canvas`, `bg.elevated`, `surface`, `border.muted`, `text.primary`, `text.muted`, `brand.primary`, `brand.accent`, `brand.on`, `state.success|warning|danger` + `on-*`

1.2 Brand Palettes (WCAG AA min)

- **Tuff Buffs**: Buff Brown `#8B5E3C`, Flatiron Blue `#2C5E86`, Prairie Gold `#E0A020`, Off-white `#F7F3EE`, Charcoal `#222`.
- **Black Belt Legacy**: Onyx `#111111`, Belt Red `#B11C1C`, Belt Blue `#1C4DB1`, Steel `#4B5563`, Paper `#FAFAFA`.
- **WEKAF USA**: Flag Blue `#0A2F6B`, Flag Red `#C61F2F`, Metallic `#9AA0A6`, Ring Gray `#303641`, Field `#F2F5FA`.
- **Ronin Dojo Design**: Ink `#0D0D0D`, Vermilion `#E53935`, Rice `#F5F1E8`, Bamboo `#4CAF50`, Smoke `#9E9E9E`.

Each brand maps to semantic slots; no hard-coded colors in components.

1.3 Typography

- Headline: **Inter** or **Manrope** (variable). Body: **Inter**. Mono: **JetBrains Mono**.
- Scale examples: `h1 48/56`, `h2 36/44`, `h3 28/36`, `body 16/24`, `small 14/20`.

1.4 Iconography & Illustration

- **Lucide** base; custom martial-arts glyphs set (SVG sprite) for belts, gi, weapons, dojo, lineage nodes, brackets.
- Stroke 1.75px, rounded joins.

1.5 Components (Core)

Atoms → Molecules → Organisms (shadcn/ui styled via Tailwind): - **Atoms**: Button, Badge, Chip, Input, Select, Toggle, Tooltip, Avatar, Progress, EmptyState. - **Data**: Table (virtualized), Card, List, Tabs, Accordion, Pagination. - **Nav**: AppShell, Topbar, Sidebar (collapsible), Breadcrumbs, Command-K. - **Feedback**: Toast, Dialog/Sheet, Alert, Skeleton, Stepper. - **Media**: Lightbox, VideoEmbed, Uploader (GF + WP media + YouTube), Gallery grid. - **Map**: MapContainer (Leaflet/Maplibre), MarkerCluster, ResultPane. - **Graph**: LineageGraph (OrgChart.js wrapper), Bracket (double-elim/round-robin), RankProgress.

1.6 Patterns

- Search + filter chips (URL-synced).
- Card grids with quick-view modals.
- "Edit in modal" for Pods entity.
- Multi-tenant theming (brand switcher) via CSS variables on `:root[data-brand="*"]`.

1.7 Accessibility

- All interactive elements keyboardable, focus ring visible, color contrast $\geq 4.5:1$, reduced motion pref.

1.8 Figma Structure

- **File**: *Mad-BBL DS* → Pages: *Foundations, Components, Patterns, Brand Variants, Templates*.
- Component properties for size/variant/brand; tokens synced via style dictionary.

2) Frontend Tech Stack

- **Vite + React + TypeScript**, Tailwind v4, shadcn/ui, Zustand (state), TanStack Query (data), React Router, Framer Motion.
- **Charts**: Recharts. **Maps**: Leaflet + MapLibre tiles fallback. **Graph**: dabeng/OrgChart.js wrapper.
- **Form**: React Hook Form + Zod; integrates with **Gravity Forms** endpoints.

Monorepo (pnpm workspaces)

```
/mad-bbl
  /apps
    /web (primary SPA/PWA)
    /wp-bridge (WordPress-injected widgets + enqueue helpers)
  /packages
    /ui (design-system components)
    /tokens (style-dictionary build → css vars, scss, json)
    /utils (shared utils, types)
    /icons (custom svg set)
```

3) WordPress Integration

3.1 Theme Pack

- **bbl-theme** (custom _s-derived):

```
/wp-content/themes/bbl-theme/
  style.css, functions.php, index.php, screenshot.png
  /assets/{css,js,src,img}
  /inc/{setup.php,assets.php,template-
tags.php,ajax.php,rest.php,walker.php,seo.php}
  /template-parts/card/{card-member.php, card-school.php}
  /templates/{directory.php, profile.php, school.php}
```

- **assets.php** wires Vite dev and production builds (manifest).

3.2 Pods Schema (core)

- **pods**: Members, Schools, Instructors, BeltRanks, Programs, Events, Results, Media, Techniques, Styles.
- **taxonomies**: MartialStyle, BeltColor, Region, WeaponType.
- **relationships**: Member ↔ School (many-to-many), Member ↔ BeltRanks (with meta: date, instructor, school, media), Event ↔ Brackets, Member ↔ Results, Instructor ↔ Lineage (parent/child).

3.3 Gravity Forms Flows

- **GF: Registration** → Pods:Member create, role assign, welcome email.
- **GF: Belt Update** → Pods:Member-Belt relationship with meta + media upload.
- **GF: Event Registration (team/solo)** → Pods:Event entries → Bracket seeding.
- Zapier hooks (Sheets, Slack, Mailchimp) as needed.

3.4 REST/Graph Endpoints

- Custom routes in `/inc/rest.php`:

- GET /bbl/v1/members?filters=...
- GET /bbl/v1/lineage/{memberId}
- POST /bbl/v1/belt-update (auth required)
- GET /bbl/v1/events/{id}/bracket

3.5 Auth & Headers

- Apache: .htaccess pass Authorization header.
- Nginx: fastcgi_param HTTP_AUTHORIZATION \$http_authorization;
- JWT plugin config; WP nonces for AJAX.

4) Brand-Specific Modules

4.1 Tuff Buffs

- Directory (map + facets), School pages, Instructor/Members with rank badges, Technique library with belt curricula, Favorites, Messaging overlay.

4.2 Black Belt Legacy

- **Lineage** visualizer (OrgChart.js) with modal profiles, export PNG/SVG, verified badge system, promotion timeline.

4.3 WEKAF USA

- Event mgmt: divisions, weight classes, bracket generators (double-elim, round robin), live scoring (websocket), rankings.

4.4 Ronin Dojo Design

- Portfolio, productized services, design ops wiki, downloadable assets, client intake GF → Pods projects.

4.5 White-Label Templates

- Starter themes with brand switcher; choose palette/typography in onboarding GF; one-click demo import (JSON + Pods presets).

5) Files & Build Artifacts

- **Style tokens build** → /packages/tokens/dist/{css,scss,json}
- **UI library build** → /packages/ui/dist (ESM + type defs)
- **WordPress** → /apps/wp-bridge/dist enqueued via assets.php.
- **Design assets** → /assets/brand/{tuff-buffs,bbl,wekaf,ronin}/{logo,colors,icons} (SVG + PDF + PNG).

- **OrgChart wrapper** → `/packages/ui/src/graph/LineageGraph.tsx`
 - **Bracket engine** → `/packages/ui/src/brackets/*` with import/export JSON schema.
-

6) Business Plan (Condensed)

6.1 Offer Stack

- **SaaS tiers:** Free, Pro, Elite (school/association).
- **Add-ons:** Verified lineage, custom domains, SMS, white-label site, live-scoring.
- **Services:** Ronin Dojo Design (branding, web builds), data migrations.

6.2 Market & ICPs

- Martial arts schools, associations (e.g., WEKAF), independent instructors, event promoters.

6.3 Pricing (example)

- Free: directory profile, 1 gallery, limited features.
- Pro (\$15-\$29/mo): full profile, lineage, events, favorites, messaging.
- Elite (\$99-\$199/mo): multi-instructor/school, white-label site, priority support.

6.4 GTM

- Partner associations (discounts), referrals (badges + credits), content marketing (tutorials, lineage stories), regional ambassadors.

6.5 Ops

- Support SLAs, status page, scheduled backups (daily DB, weekly media), audit logs.
-

7) Roadmap & Milestones

Phase 1 (Weeks 1-3): Foundations - Monorepo, tokens, UI primitives, WP theme scaffold, Pods schema, GF registration.

Phase 2 (Weeks 4-6): Directory & Profiles - Map + facets, member/school cards, profile pages, media gallery, favorites.

Phase 3 (Weeks 7-9): Lineage & Belts - OrgChart wrapper, belt timeline, verification workflow, badge system.

Phase 4 (Weeks 10-12): Events & Brackets - Event CRUD, seeding, double-elim/round-robin, live scoring demo.

Phase 5 (Weeks 13-14): White-Label & Theming - Brand switcher, onboarding GF, template export/import.

Phase 6 (Weeks 15+): Hardening & Launch - Perf, a11y, SEO, docs, billing hooks, Terms/Privacy.

8) CI/CD, Versioning, Backups

- GitHub + Actions: build tokens, lint/test, storybook build, artifact upload.
 - Release channels: `canary` (preview), `stable`.
 - WP deploy: `rsync` or SSH action to Flywheel/host, DB migrations via WP-CLI scripts.
 - Backups:
 - App: nightly tarball of `/packages` + `/apps` + `.env.example` + manifests.
 - WP: daily DB dump + weekly media sync to cloud bucket.
-

9) Legal & Licensing (high level)

- Dual-license components: OSS MIT for base, commercial license for brand assets & premium modules.
 - Client SOWs: deliverables, IP ownership (work-for-hire vs license), update rights, support terms, data processing addendum.
-

10) Checklists

10.1 Local Dev

- `pnpm i` → `pnpm -w build` → `pnpm dev` (web) → `wp-bridge` served by WP `assets.php`.
- Tailwind build with v4 CLI; storybook optional for UI review.

10.2 WordPress

- Install theme `bb1-theme` → activate Pods & Gravity Forms → import Pods presets → add GF keys → create pages: Directory, Profile, School, Events.

10.3 Data Seeds

- Import seed JSON: members, schools, belts, techniques, events.
-

11) Manifests (for Zips you asked about)

- **Ronin-Dojo-Design_Dashboard-Suite_v2.zip**
- `/wp-content/plugins/ronin-dashboard/` (admin cards, KPIs, GF/Pods shortcodes, assets)
- README with backup/version-control SOP
- **bb1-theme.zip**
- Full theme tree (above) + `assets/src` sources

- **mad-bbl-ui.tgz**
 - Compiled UI lib + tokens
-

12) Recovery SOP (pin this)

1. Export site + repo weekly; store `manifest.md` at repo root.
 2. For each major delivery, include: *zip, manifest, rebuild commands, changelog*.
 3. Mirror key chats in `docs/notes/` as markdown snapshots with date stamps.
-

13) Open TODOs (high priority)

- [] Generate `.env.example` schema for all apps (WP, web, bridge).
 - [] Finalize token → Tailwind mapping and brand switch mechanism.
 - [] Draft Pods import JSON for Members/Schools/BeltRanks/Styles.
 - [] Create GF forms: Registration, Belt Update, Event Registration.
 - [] Write REST route stubs in `/inc/rest.php` and test with Postman.
 - [] Scaffold bracket generator package with JSON schema & tests.
-

If you want the actual starter files zipped, say which bundle(s) you want first (theme, plugin, mono-repo skeleton), and I'll generate the archives with manifests immediately.
